Insert micro-manifold for very low dead space

Low working volume means fast exchange times.

Oocyte Perfusion Chamber

- Small working volume (< 20 µl)
- Fast solution exchange

Expression of recombinant receptors in oocytes has been a favorite choice for researchers to assess the pharmacology of signal transduction pathways. Since the oocytes are 1 - 1.5 mm in diameter, however, fast solution exchange around the oocyte was difficult. After several years of electrophysiological research, we have designed a *Xenopus* oocyte perfusion chamber for use in automated and unattended experiments. Combined with an automated perfusion system, this chamber allows researchers to obtain dose-response data quickly and easily.
